

Exercise 1:

Imagine that you have one client that wants to build a web page that will contain some personal information. He does not know exactly how the page should look like, and which information must present on it. He simply knows that it must contain his personal picture, contacts, and links to his social networks.

In Group of two persons and using Balsamiq please prepare a prototype to present to your customer. Add to your prototype any information you think to be useful. (5 min-10 min)
